ABOUT

The first lever of sport performance is sport technique which is determined by two things: **posture and movement**.

And, at training time, on a daily basis, posture and movement are defined by two sides that interact in order to **optimize** it:

On one side, **coaches** use their visual expertise and their experience to analyze and correct. On the other side, **athletes** use their proprioception i.e. the perception of their own body in space to apply corrections and optimize its technique.

So, in this environment, posture and movement are **subjective and qualitative data** which makes them hard to optimize.

This problematic impacts as well **professional athletes** who are evolving in an increasingly competitive environment; **amateur athletes** who are exposed to numerous injuries often due to the repetition of small parasitic movements; **coaches** who want to communicate their expertise in the clearest and most precise manner; and **companies that innovate in the field of sport** that want to quantify the impact of their products on the movement and therefore on the sports performance.

DEEPTIMIZE is the **first AI online platform** that enables, from a simple photo/video, to automatically extract **quantitative data** related to posture and movement. To do so, we leverage the latest and **most advanced computer vision** and machine learning methods to provide visualizations and data that are actionable by both coaches and athletes.

THE ROLE

DEEPTIMIZE is an **early-stage start-up** that is going to grow fast with an ambitious strategic development. Thus, as an intern in DEEPTIMIZE, you'll have a specific mission but you also will have the opportunity to **discover all about entrepreneurship**.

Your main mission will be to:

First, **compare** and experiment different **methods** for pose estimation;

Second, **create** a new **dataset** for our needs;

Third, **improve** existing models using this dataset.

This internship will make you one of the first joiners at DEEPTIMIZE and will open to a full time position as data scientist and/or a Ph.D. in a great research lab financed.

DESIRABLE SKILLS

Technical:

You are currently graduating a **Master's degree** in Statistics, Applied Mathematics, Data Science or Engineering;

Knowledge in machine learning, **deep learning** and more particularly computer vision (CNN mostly), and one of the main **libraries for ML** (TensorFlow, PyTorch, Scikit-learn ...).

Good skills in **Python**.

Scientific rigor.

Personal:

You like to **build from scratch** and learning;

You are passionate and motivated by **sports/health**.

Good **english** (written and spoken) ;

Excellent communication skills;

WE OFFER

Good salary for an internship;

Building the future of sport technique, posture and movement, and having a great impact on sport performance and health;

Working and develop new **state-of-the-art AI** methods;

A company where you can **learn as you go** with an **ambitious and benevolent team** to be built;

Office in one of the **world's best incubator for sport innovation** (and some remote if you want).
