A two-level domain-decomposition preconditioner for the time-harmonic Maxwell's equations

Marcella Bonazzoli¹, Victorita Dolean^{1,2}, Ivan G. Graham³, Euan A. Spence³, and Pierre-Henri Tournier⁴

Experiment 1. A bug occurring in the generous overlap case was fixed and the new improved Table 1 is the following.

k	n	N_{sub}	n_{CS}	#AS	#RAS	#HRAS
10	4.6×10^5	1000	7.9×10^3	53	26	11
15	1.5×10^6	3375	2.6×10^4	59	27	11
20	7.1×10^6	8000	6.0×10^4	63	28	11

Table 1 $\delta \sim H$ (generous overlap), $H \sim H_{\text{sub}} \sim k^{-1}$, $\kappa_{\text{prob}} = \kappa_{\text{prec}} = k^2$.
